ONE AVIGHNA PARK
Lower Parel, Mumbai

TO NAME A FEW.

THE POINT DRAINAGE

The point drainage consists of a system of slopes on the surface of the interested area apt to create a series of funnels with points of collection and evacuation of the water in the centre

DISADVANTAGES:

- Difficult to plan
- Difficult to execute
- Difficult to maintain
- Possible troubles to the road traffic
- Aesthetic mis-match with overall architecture

TYPICAL APPLICATION AREAS

LINEAR DRAINAGE

The line drainage consists of a line of pre-manufactured channels with different gratings according to the appropriate load-class. These "drainage lines" have the task to collect and carry the rain-water towards the sewage.

ADVANTAGES:

- Easy to plan
- Easy to execute
- Reduces underground pipes
- Easy to clean and maintain, no necessity of important excavations
- Exploit the drainage line as a component of architecture
